## Customer FAQs

### How are the cabins delivered?

Your Log Cabin will arrive as individual boards that slot together. This makes assembly easy and gives a strong building with interlocking corners for strength.

### How easy are they to build?

Our Log Cabins are simple and easy to build. We provide easy-to-follow digital instructions.

### What are the different treatment types?

Pressure Treatment is where chemical preservatives are forced deep into the wood's fibres to resist rot, decay and termites. Pressure treatment gives the wood on your building an extra level of protection and is an effective way of making your building long-lasting.

### Do they come with any warranty?

Yes, the wood on your log cabin is protected against rot, decay and insect infestation (not timber splits or warping, which may occur naturally over time) for up to 10 years.

### Will my cabin need a base?

Yes, all garden buildings should be assembled on a firm and level base. A base will ensure your building has a solid, long-lasting and well-drained foundation. In order to protect your building from moisture, you should leave a 2ft gap
